

LEGEND

To obtain more detailed information in areas where Base Flood Elevations (BFEs) and/or Floodway Areas have been determined, users are encouraged to consult the Flood Profiles and Floodway Data Tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRI. Users should be aware that BFEs shown on the FIS are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS should be used in conjunction with the FIRI for purposes of construction and/or floodplain management.

BFE elevations listed on this map were obtained and/or developed to establish vertical control for determination of flood elevations and floodplain boundaries portrayed on this map. Users should be aware that these BFE elevations may have changed since the publication of this map. To obtain up-to-date elevation information on National Geographic Survey (NGS) BFEs shown on this map, please contact the Information Services Branch of the US at (202) 773-3242, or visit their website at www.ngs.noaa.gov. Map users should seek verification of the non-NGS BFE monument elevations when using these elevations for construction or floodplain management purposes.

Coastal BFEs shown on this map may apply only landward of 0.0' MVD. Users of this FIS should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this community. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIS.

LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDED BY 100-YEAR FLOOD

ZONE A
No base flood elevations determined.

ZONE AE
Base flood elevations determined.

ZONE AH
Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.

ZONE AO
Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, vehicles also determined.

ZONE A99
To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevation determined.

ZONE V
Coastal flood with velocity hazard (wave action); no base flood elevations determined.

ZONE VE
Coastal flood with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

ZONE X
Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.

OTHER AREAS

ZONE X
Areas determined to be outside 500-year floodplain.

ZONE D
Areas in which flood hazards are undetermined.

UNDEVELOPED COASTAL BARRIERS

Identified 1980
Coastal barrier areas are normally located within or adjacent to Special Flood Hazard Areas.

Identified 1990
Floodplain Boundary

Identified 1990
Floodway Boundary

Boundary
Dividing Areas of Different Base Flood Elevations Within Special Flood Hazard Zones.

Base Flood Elevation Line
Elevation in Feet. See Map Index for Elevation Datum.

Cross Section Label
Base Flood Elevation in Feet Where Uniform Within Zone. See Map Index for Elevation Datum. Elevation Reference Mark.

RM7
M2
River Mile

* Referenced to the National Geodetic Vertical Datum of 1929

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planning features outside Special Flood Hazard Areas. The community map repository should be consulted for more detailed data on BFEs, and for any information on floodway delineations, prior to use of this map for property purchase or construction purposes.

Areas of Special Flood Hazard (100-year flood) include Zones A, AE, A1-A30, AH, AO, A99, V, VE, and V1-V30.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpreted between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in same areas may be too narrow to show to scale. Refer to Floodway Data table where floodway width is shown at 1/20 inch.

Corporate limits shown are current as of the date of this map. The user should contact appropriate community officials to determine if corporate limits have changed subsequent to the issuance of this map.

This map may incorporate approximate boundaries of Coastal Boundaries Resource System Units and/or Other Protected Areas established under the Coastal Barrier Improvement Act of 1990 (PL 101-591).

For adjoining map panels and base map source see separately printed Map Index.
